DETAILED ACTION

Response to Arguments

Applicant's arguments with respect to claims 1-22 have been considered but are most in view of the new ground(s) of rejection.

Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the plurality of lasers must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Objections

-Claim 4 is objected to because of the following informalities: no-patentable weight has been given to the process used to form the mirrored surface,
-since it implies a product by process claim. Appropriate correction is required.

Claim 6 is objected to because of the following informalities: spelling of has.

Appropriate correction is required.

-patentable weight has been given to the technology used to form the ceramic carrier,
-since it implies a product-by-process claim. Appropriate correction is required.

Art Unit: 2828

Claim 16 is objected to because of the following informalities: spelling of antireflection. Appropriate correction is required.

Claim 21 is objected to because of the following informalities: no patentable weight has been given to the process used to secure the carrier plate, since it implies a product-by-process claim. Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

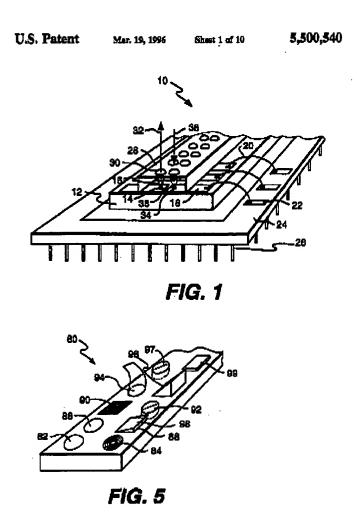

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1,2,3,5,6,8,9,15,16 and 20-22 are rejected under 35 U.S.C. 102(b) as being anticipated by Jewell et al (PN 5,500,540).

Figure 1 illustrates an array of lasers having an optoelectronic chip (12) where the array of lasers are carried, an optical chip (28), which covers the array of lasers with an optical element (30) where the laser beam emits. A wire bond (20) electrically connects the laser to a terminal pin (26). Pins (26) are connected through macroscopic package (24) where optical chip is mounted.

Figure 5 illustrates an optical chip (80) having optical elements, which may be used in place of optical chip (28), as disclosed in column 8 lines 23-49.

Art Unit: 2828

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 4,7 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jewell et al (PN 5,500,540) in view of Hwu et al (6,259,713).

Art Unit: 2828

Figure 1 illustrates an array of lasers having an optoelectronic chip (12) where the array of lasers are carried, an optical chip (28), which covers the array of lasers with an optical element (30) where the laser beam emits. A wire bond (20) electrically connects the laser to a terminal pin (26). Pins (26) are connected through macroscopic package (24) where optical chip is mounted.

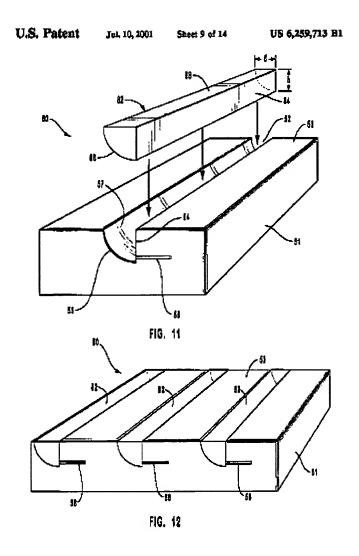

Figure 5 illustrates an optical chip (80) having optical elements, which may be used in place of optical chip (28), as disclosed in column 8 lines 23-49.

Jewell et al does not disclose a ceramic carrier having a mirrored surface or a recess within the carrier.

Hwu et al illustrates in figures 11 and 12 a ceramic substrates having a recess within the substrate and having a mirrored surface on the ceramic substrate where a transparent optical element is placed within the recess which includes the mirrored surface to reflect the laser beams of the diode laser array towards a transparent flat surface which covers the entire recess. In column 11 lines 18-25 discloses using ceramic substrates are highly thermally conductive.

Therefore, it would have been obvious to a person having ordinary skill in the art to use a ceramic substrate as taught by Hwu et al because it would improve heat dissipation of the laser beams.

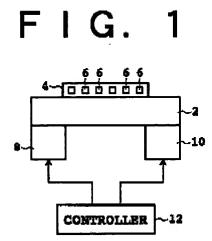

Art Unit: 2828

Claims 17-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yamamoto et al (PN 6,038,242).

The use of Peltier elements to provide cooling or temperature control to the substrates of laser system is well known in the laser art as shown in figure 1.

Art Unit: 2828

Claims 11-14 are rejected under 35 U.S.C. 103(a) as being unpatentable.

The use of adhesives or solder to bond structural elements in the laser art is notoriously well known in the art.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Armando Rodriguez whose telephone number is (703) 308-6218. The examiner can normally be reached on 10-hour day / M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Paul Ip can be reached on (703) 308-3098. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 308-7722 for regular communications and (703) 308-7721 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-4881.
